Not all math discussions are the same. It is one thing to ask students to share how they solved a problem, to put ideas on the table so that their thinking becomes visible; But knowing what to do with students' ideas, go with them, can be a daunting task. Intentional talk provides teachers with a framework for planning and facilitating on-site math discussions enrich and deepen student learning. According to Elham Kazemi and Allison Hintz, the first critical step is to identify the objective of a discussion and then understand how its structure and facilitate the conversation meet that objective. Through detailed views of primary and primary classrooms, the authors provide a window into what teachers are thinking as they lead discussions and make important pedagogical and mathematical decisions along the way. In addition, the authors examine the roles of students as listeners and speakers and, in the process, offer a number of strategies to improve student participation learning. A collection of planning templates included in the Help teachers apply the correct structure to discussions in their own classrooms. Intentional talk provides the perfect bridge between student participation conceptual understanding in mathematical discussions.
